

## **Title: Basics of HTML**

**Page 1:** HTML stands for HyperText Markup Language. It is the standard language used to create webpages. HTML consists of a series of elements that tell the browser how to display content. Elements are represented by tags, such as `<h1>`, `<p>`, and `<a>`. These tags structure the webpage and help in organizing text, images, and links.

The most common tags include:

- `<h1>` for headers
- `<p>` for paragraphs
- `<a>` for hyperlinks

HTML documents are saved with a `.html` extension and can be opened in any web browser.
